

--ABSTRACT OF THE DISCLOSURE

The invention relates to an injection pump for application of highly viscous media that have to be applied with high pressure, in particular during percutaneous vertebroplasty.

Vertebroplasty relates to a method for treating bone pain which can occur, in particular, in spinal diseases or in other bones.

Osteoporosis is the beginning of ~~said~~ the disease, subsequently leading to tumoural diseases. The pain, in ~~said~~ this group of diseases, is related to an increase if the loss of bone mass,

which can also be associated with an increase in bone deformity.

~~Said~~ This deformity causes pain to the patient, ~~said~~ the pain being a piercing, sometimes deep, drilling-like pain.--
